Three X Sage 50

The integration with Sage 50 suite is provided through a Sage add on program called Maintenance Manager 50. Maintenance Manager 50 is fully integrated with Sage Accounts and Payroll. It provides the office back end system for job set up and allocation to engineers, feeds job instructions to Three X and the mobile devices and records the engineers' data updates. All costs associated with the job are recorded and posted to Sage 50 Accounts and Payroll. Invoices for the jobs are produced automatically and posted to Sage 50.
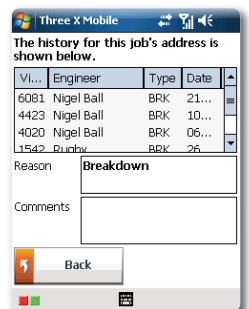

Jobs are received in real-time

Your engineers always have access to a real-time view of their schedule so they can focus on getting the job done. This avoids unnecessary calls back to the office and also allows urgent jobs to be prioritised to the top of the list.

Quick and easy navigation

Built-in GPS navigation ensures quick and efficient travel from job to job, cutting out unnecessary miles. The addresses are imported automatically so there's no need for manual keying. Easy.

The right info to complete the job

Accurate and timely information about each job is available. This prevents the errors and inaccuracies that are associated with hand-written paper based forms.

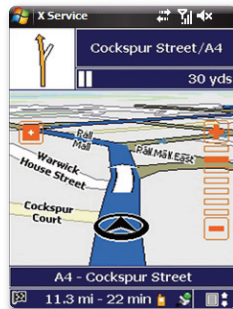

Job History just a click away

Your mobile workers need quick and easy access to job histories and Three X Sage 50 delivers this without fuss. Access to the right information ensures the best possible customer service and avoids errors or duplication.

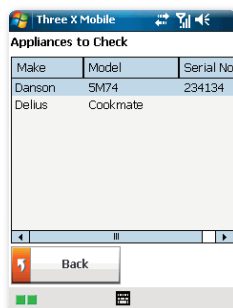

Proof of work done

Electronic signature capture gives you proof of work done and is sent back instantly to the office. This allows invoices to be issued immediately, improving your cashflow. No more waiting for paperwork to be returned to the office.

Increase billing and payroll accuracy

Three X Sage 50 captures accurate start and end times for each job. This provides detailed information allowing the accuracy of billing and payroll to be improved and the number of discrepancies to be reduced.
